

RESPONSE TO ELECTION OF SPECIES
U.S. Appln. No. 10/090,639

The read section 2 reads the brightness value of the light emission element to be represented in a predetermined period. (Page 9, lines 8-12). The $\Delta\Sigma$ modulation signal processing section 3 converts the numeric value read by said read section 2 into distribution of occurrence probability at each level of the output brightness value at the three or more levels (Figs. 7B, 8A, and 8B; page 13, line 16, to page 14, line 14).

F. Non-limiting examples of reading claim 1 on the species

Non-limiting examples of how claim 1 reads on species I to IV are similar to the examples of how claim 2 reads on the species.

G. Conclusion

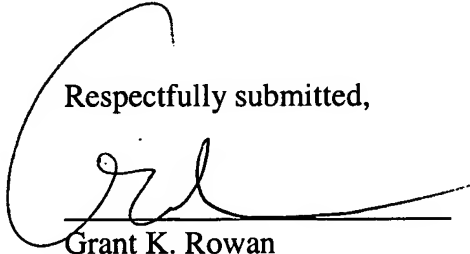

In light of the discussion above, Applicants submit that claims 1 and 2 are generic to all species. Applicants reserve the right to file Divisional Applications directed to non-elected Species II, III and IV.

The USPTO is directed and authorized to charge any required fees (except the Issue Fee and/or the Publication Fee) to our Deposit Account No. 19-4880. Please also credit any overpayments to said Deposit Account.
